The Perfectus Shared Library is an enterprise level content management application created for organizations with a large number of templates and common data between the templates.

The Shared Library offers a single repository where Perfectus objects such as questions, web pages, templates and outcomes can be used across multiple IP packages creating a single source of control. Shared Library also offers a smart object reporting option providing visibility on 'where-used' across the Perfectus suite and assembled documents.

- Faster development of IP packages using common objects
- Ability to update multiple packages at object level reducing maintenance time
- Reporting on object 'where-used' reducing risk by providing usage visibility
